

ENERGY VALVES

PRODUCT SPOTLIGHT

500° flanged floating ball valves in stock

Energy Valves now has 1"-6" WKM 320F floating ball valves in stock with CGF trim.

A couple more awesome, but often overlooked features of the WKM 320F:

1. MTRs provided with every valve.
2. All trim combinations conform with NACE MR0175/ISO 15156!
3. No O-rings! How many times have you heard customers say, "I cannot use Buna because...", or "I cannot use Viton because...", or "The trim has to be resistant to explosive decompression"? All of those refer to the rubber O-rings. No O-rings, no problem!
4. For more information, give us a call or you can review the entire catalog on our website

They say that a picture is worth a thousand words, so I guess that makes a video worth... a million?? Check out this great animation that Cameron put together, highlighting the [WKM 320F](#).
